

# Carver County COVID-19 Situational Analysis 1/18/22

## CARVER COUNTY

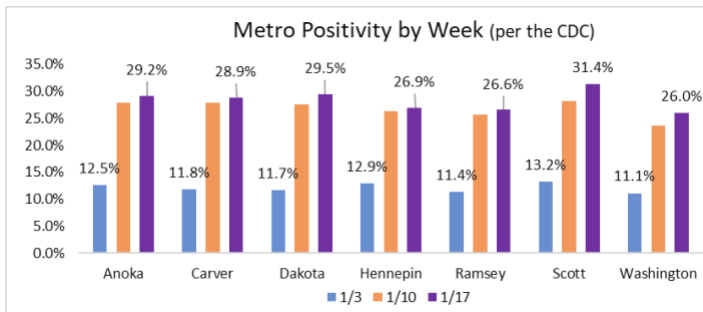

**KNOWN CARVER COUNTY CASES** The small hook downward is probably due to delayed reporting due to the Martin Luther King Jr. holiday. Note that due to widespread home testing that is not reported, tests being less sensitive to Omicron and overwhelmed testing labs starting in mid-November, this undercounts actual cases. (1/18/22)

**TRANSMISSION IN CARVER COUNTY IS HIGH** According to the latest CDC data, the County’s positivity remains above 28%, far above the 5% standard for concern. (CDC, 1/18/22)

**CARVER COUNTY POSITIVITY PER THE CDC** Carver County’s positivity rate has increased dramatically. Carver County’s positivity is about five and a half times the level recommended for concern. (CDC 1/18/22)

**METRO COUNTIES POSITIVITY** Positivity remains extremely high among all Metro counties. (CDC 1/18/22)
